

# EUROLineScan

Automated evaluation of membrane-based test systems

- Standardised evaluation of all EUROIMMUN blot products
- Complete results available within few minutes after incubation and digital archiving of results
- Bidirectional connection to LIS or EUROLabOffice 4.0
- Flexible and scalable automation solutions

## EUROLineScan

The **EUROLineScan** system is designed for automated evaluation of incubated membrane-based test systems and administration and detailed documentation of the obtained results. The software automatically records and identifies the bands and measures their intensity. The automated evaluation of the test strips can be monitored and, if necessary, edited manually. Any changes are automatically documented. Eventually the results are archived electronically together with the image data, so that it is no longer necessary to store the potentially infectious strips. An individual result sheet can be created for each patient.

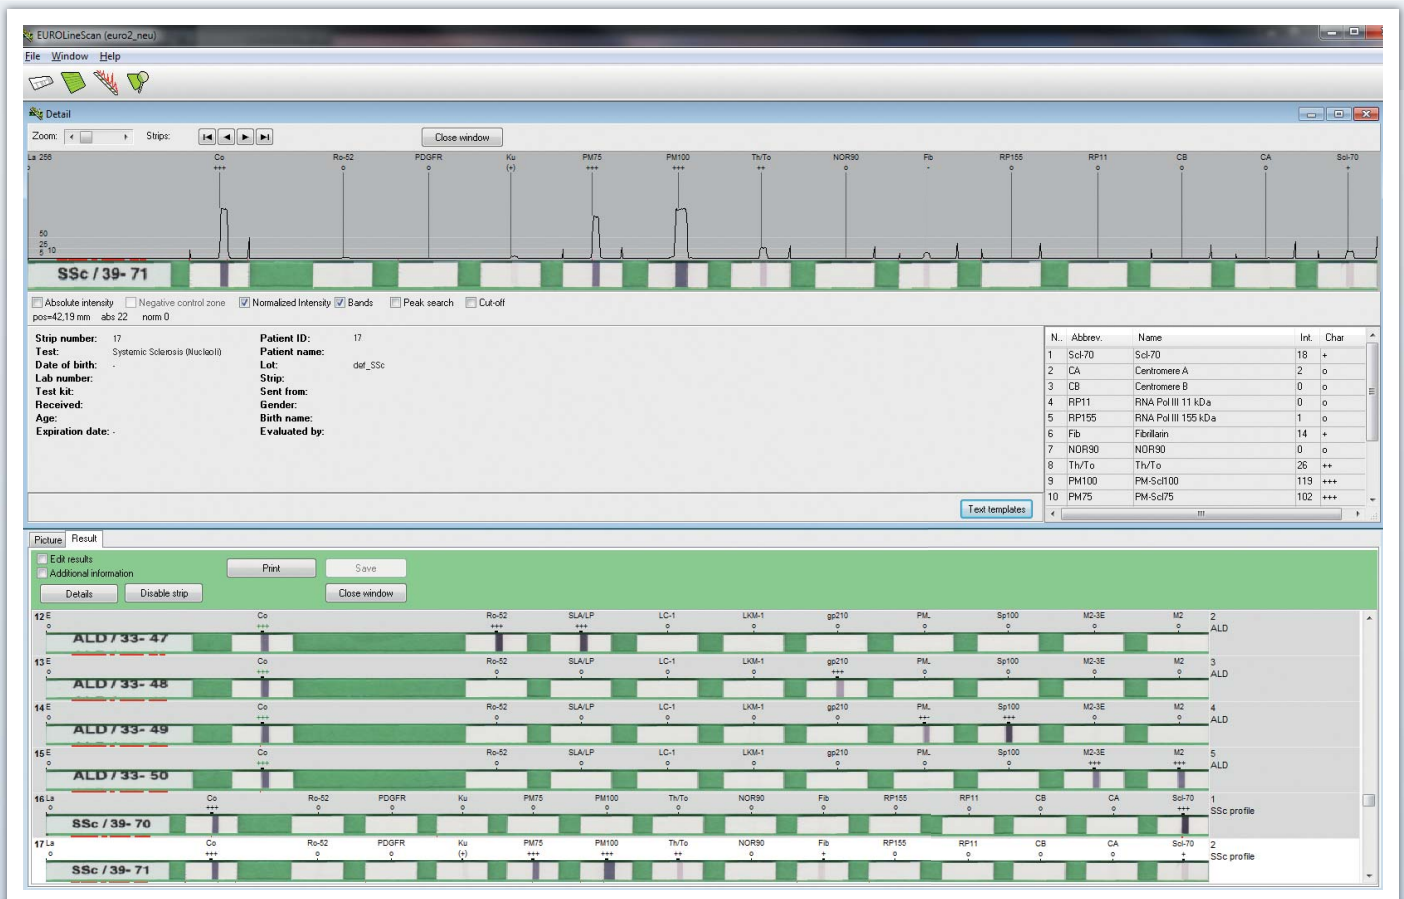

**EUROLineScan** does also cover the bidirectional communication with **EUROLabOffice 4.0** (laboratory management software) or a laboratory information systems (LIS) for the import of worklists and export of results.

The compact fully automatic instrument **EUROBlotOne** is designed for standardised processing of EUROIMMUN immunoblot strips (EUROLINE, EUROLINE-WB, Westernblot) – from sample recognition to the final analysis result. The samples are pipetted by the instrument and all incubation and wash steps are performed fully automatically. In the last step, the image data recorded by the integrated camera are automatically transferred to the **EUROLineScan software**.

As an alternative to **EUROBlotOne**, the immunoblot strips can also be incubated manually or using the **EUROBlotMaster** and recorded using a flatbed scanner. In this case, the automated evaluation is then also carried out by **EUROLineScan**.

**EUROIMMUN** is happy to assist you in the implementation of the EUROLineScan program in an existing laboratory environment.

## Evaluation of incubated blot strips with EUROLineScan

### System requirements:

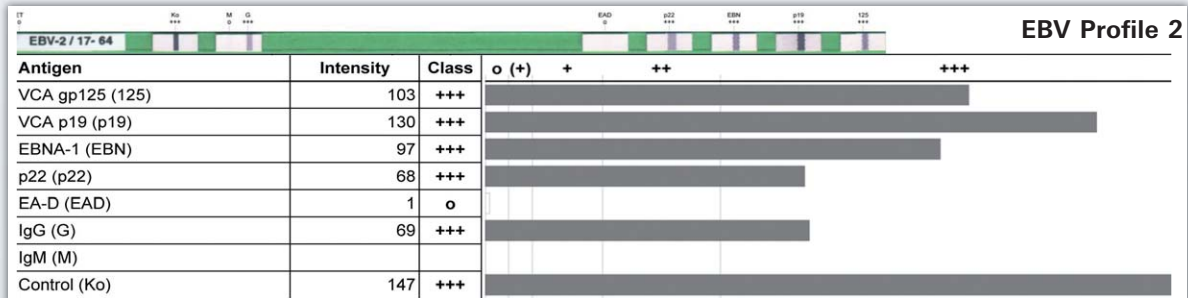

**Computer:** Pentium from 350 MHz or compatible with Windows XP, Windows Vista, Windows 7, Windows 8 or Windows 10, 512 MB RAM, approx. 1 GB free hard disc space (for the sole installation 120MB, the remaining space for graphic and patient data). Graphic and screen resolution at least 1024x768. **Flatbed scanner:** Canon LiDE Serie, at least 300dpi; recommended: 600dpi. **Camera system:** for direct recording of the membrane strips in the incubation tray; only available from EUROIMMUN. **Printer:** standard commercial printer is sufficient (for findings and protocols). **Barcode scanner:** Jarltech 2009 for Westernblot templates, and Honeywell Xenon 1900 or Symbol DS6707 for EUROASSAY slides.
